## NEW BELT GUARD FOR ACE PTOC AND PTOC-150 SERIES PUMPS

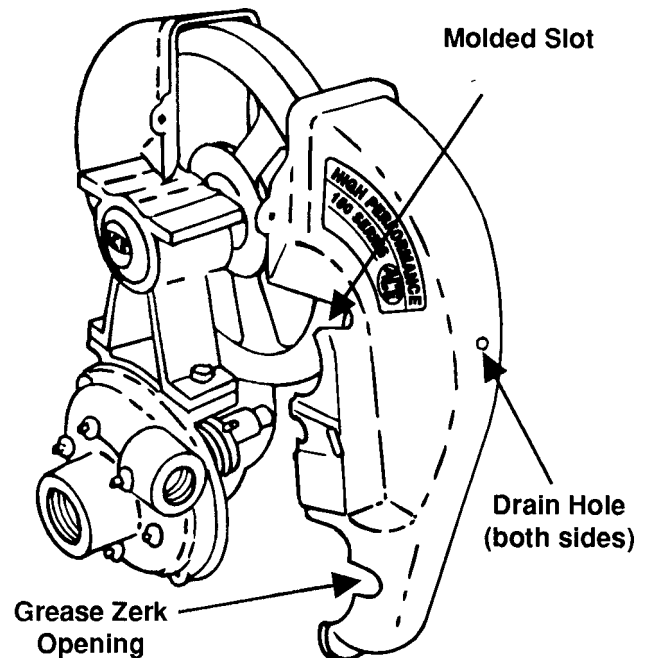

The BGKB belt guard that has been standard on all PTOC and PTOC-150 Series pumps has been superseded by a revised design that became standard in August, 1994. The revised design fits all past and present PTOC pump models.

The new belt guard offers the following features:

- Increased pulley clearance.
- Molded slot to accommodate base-mounted pumps.
- An opening to provide access to the zerk fitting on the idler arm; now it can be greased without removing the belt guard.
- Drain holes on both sides of the guard to provide drainage when the pump is mounted on the sprayer in a horizontal position.
- Belt guards for 150 Series pumps will feature a 150 Series logo pad printed on them.

The new belt guards can be easily identified by the squared-off radius where the guard fits around the pulley.

The new belt guards will have the molded slot regardless of whether they will be installed on PTO mounted pumps or base mounted pumps. The BGKB and the BGKB-150 belt guard kits are physically interchangeable except the BGKB-150 is marked with 150 Series logo.
